THE NETWORK IS ABOUT SYSTEMS CHANGE

Established in 2016, the MB HIV/STBBI Collective Impact Network works to break down silos between researchers, community-based organizations, practitioners, policymakers, indigenous leaders and organizations and others. We work on understanding **systems gaps and barriers** and bringing diverse stakeholders together to develop **innovative community-based culturally responsive solutions**.

We advance key goals to increase HIV/STBBI testing, improve linkage to care and decrease the incidence of HIV/STBBI by tackling the complex system related issues.

OUR FIVE KEY FOCAL ACTIVITY AREAS INCLUDE:

- Advancing innovative **Testing** approaches and technologies in Manitoba
- Implementing and Evaluating the **Collective Impact Network** as A Means to Achieve Impact
- Understanding and Tackling **Stigma** through Research, Evaluation & Action
- Supporting **Community Innovation** through Research, Evaluation & Action
- Establishing Collaborations with **Indigenous Leaders and Programs** to Tackle Complex System Issues through Research, Evaluation & Action

The New MB HIV-STBBI Collective Impact Network Framework

Based on “Accelerating Our Response”-Federal Government STBBI Framework 2019

Our Theory of Change

What Progress Are We Making to Get to Zero?

**Seven collaborative teams resulted and received funding for specific projects from CIHR & REACH
The Network receives funding from PHAC-CAF and REACH Nexus to fund innovative activities and be part of a national network**

**Increased relationships
with First Nations Health
Leaders**

**Developing of a First
Nations HIV Community
Readiness Guide**

**Introduction of Dry
Blood Spot Testing
concept to MB**

**Developing of an Event-
Based Testing Guideline**

**Establishment of an
Ethical Space Capacity
Building Process**
